

ALICHROMA

Gauges + Applications

0.30mm Satin

Offers a low profile to resist picking at the corners. General purpose gauge well suited to business cards, award plaques and promotional items. A tough general purpose gauge, but still with some flex for gentle curves.

0.50mm Satin | Matte

The all-rounder, 0.50mm is our most popular gauge for ID and rating plates. Readily cuts to shape and is able to have punched holes for mechanical mounting. Pressure laminate up to 5mm for structural applications. Lowest prices in the AliChroma range.

1.00mm Satin

Recommended for signs, plaques and labels where impact damage or vandalism is a risk. Won't bend under moderate pressure, perfect if you are stamping your own variable information. Up to 25 micron thick anodic layer for increased abrasion resistance in heavy industry applications.

1.50mm Satin

Brilliant for self-supporting control panels or fascia with holes cut for inserts. Stays flat when fixed with rivets or screws for maximum security. Makes a great ID tag for luggage, sets of keys, tool boxes and fuel cans around the boat, car or workshop.

EngravaPlate | Marking and Engraving Services

Our Plate Engraving Service is the easy way to add serial numbers and weight capacities to your pre-printed plates. No more running out of plates, we'll guarantee supply in 2-3 days. Simply email us the information to be marked.
